

March Quarter 1997

EMBARGO: 11:30 AM (CANBERRA TIME) THU 11 SEP 1997

Wage and Salary Earners

Australia

NOTES

RELEASE SCHEDULE

This issue of *Wage and Salary Earners, Australia* is the first since the March quarter 1995. It is a composite issue for the June quarter 1995 to the March quarter 1997 inclusive, and includes revised figures for previous periods.

The delay in releasing this publication is due to the implementation of significant revisions to the series which are outlined in Notes on estimates (see below).

ISSUE (Quarter)	EXPECTED RELEASE
June 1997	17 October 1997
September 1997	6 February 1998

.....

CHANGES IN THIS ISSUE

The title of this publication was formerly *Employed Wage and Salary Earners, Australia*.

The format and tables of this issue have been revised in accordance with changes in Australian Bureau of Statistics (ABS) publication standards.

Tables showing male/female splits have been excluded as this information is no longer collected (from the September quarter 1996). Standard Institutional Sector Classification of Australia (SISCA) tables have also been omitted.

Industry classification: From this issue industry is classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC) (see paragraphs 13–15 of the Explanatory Notes).

Historical ANZSIC estimates: Previously published Australian Standard Industrial Classification (ASIC) industry estimates have been recompiled on an equivalent ANZSIC basis back to the September quarter 1983.

.....

NOTES ON ESTIMATES

Revisions: There have been extensive adjustments to the private sector series in this publication. Detailed investigations have revealed that a large number of mainly small businesses which should be on the ABS Business Register are not there. As well as the omissions there are considerable lags in processing new businesses on to the Register. This has resulted in a substantial understatement of employment and earnings series previously published. The adjustments have been backcast to the introduction of the series in 1983–84 in this publication. Refer to paragraphs 20–23 of the Explanatory Notes.

Public sector data previously provided for the December quarter 1994 and the March quarter 1995 have been revised due to the inclusion of more recent data.

.....

INQUIRIES

- For information about other ABS statistics and services refer to the back of this publication.
- For further information about statistics in this publication and the availability of related unpublished statistics, contact Ken Clarke on Perth 08 9360 5141.

W. McLennan

..... EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates from the quarterly Survey of Employment and Earnings (SEE) which was introduced in the September quarter 1983. The survey is designed to obtain, from employer units, information on numbers of wage and salary earners employed each month and their quarterly earnings. It replaced the civilian employees series, based principally on information obtained from payroll tax returns, which was discontinued after April 1980.

SCOPE

2 All wage and salary earners who received pay in any pay period ending within the quarter were represented in the survey, except:

- members of the Australian permanent defence forces;
- employees of businesses in the private sector primarily engaged in agriculture, forestry and fishing;
- employees in private households employing staff;
- employees of overseas embassies, consulates, etc.;
- employees based outside Australia; and
- employees on workers' compensation who are not paid through the payroll.

3 An indicator of the number of wage and salary earners out of scope as at June 1996 is shown in the following list:

New South Wales	69,122
Victoria	46,600
Queensland	53,350
South Australia	18,916
Western Australia	27,093
Tasmania	11,001
Northern Territory	5,224
Australian Capital Territory	9,128
Australia	240,434

4 Estimates of the number of employees in private sector Agriculture, forestry and fishing and Private households employing staff were derived from the Labour Force Survey (LFS). Data relating to the number of permanent defence force members are based upon information supplied to the ABS by the Department of Defence.

5 Also excluded are the following persons who are not regarded as employees for the purposes of this survey:

- directors who are not paid a salary;
- proprietors/partners of unincorporated businesses; and
- self-employed persons such as subcontractors, owner/drivers, consultants and persons paid solely by commission without a retainer.

STATISTICAL UNIT

6 The statistical unit for the survey comprises all activities of an employer in a particular State or Territory. Each statistical unit is classified to an industry which reflects the predominant activity of the business in the State or Territory. See paragraphs 13-16 for more information on classification by industry.

EXPLANATORY NOTES *continued*

SURVEY METHODOLOGY AND DESIGN

7 A sample of approximately 10,000 employer units is selected from the ABS Business Register to ensure adequate State and industry representation. Of these, approximately 7,500 are in the private sector and 2,500 are in the public sector. The survey is conducted by mail each quarter. However, data for a number of Commonwealth, Australian Capital Territory and Northern Territory government departments are collected electronically.

8 Information on monthly number of employees and quarterly earnings is collected each quarter. For the first and last month of each quarter, only the total number of employees is collected; for the mid-month of each quarter, the number of full-time and part-time employees are collected. Up until May 1996 the number of male and female employees was also collected.

9 Public sector statistical units are stratified by State, industry and number of employees. Private sector units are further stratified by institutional sector classification. An equal probability sample is selected from each stratum.

SURVEY DESIGN CHANGES

10 From the March quarter 1997, the industrial classification used in the sample design of the SEE is the Australian and New Zealand Standard Industrial Classification; for more details refer to *Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993* (Cat. no. 1292.0). It replaces the Australian Standard Industrial Classification (ASIC) previously used.

11 A consequence of the introduction of ANZSIC is that in the March quarter 1997 there is a higher than normal proportion of newly selected units in the sample. Approximately 58% of the survey units in the March quarter 1997 were new to the sample compared with the usual 8–12%.

12 The high proportion of newly selected units has resulted in higher than normal standard errors on estimated December quarter 1996 to March quarter 1997 movements. Hence caution should be used when comparing the March quarter 1997 estimates with previous quarters' estimates.

INDUSTRY CLASSIFICATION

13 From the March quarter 1997 issue of this publication, industry information shown in the tables is classified according to the ANZSIC, replacing the ASIC.

14 The major objectives of developing ANZSIC to replace ASIC were:

- to improve the alignment with the International Standard Industrial Classification;
- to achieve a better balance across the classification by giving more attention to the service sector including segments relating to culture, entertainment and other recreational industries;
- to take account of the effects of technological changes; and
- to take account of changes in the structure of industry generally.

15 As a result of the classification change, industry tables in this publication adopt all 17 major ANZSIC Divisions except for Agriculture, forestry and fishing which is out of scope for the private sector. See paragraph 2 for additional scope exclusions.

HISTORICAL ANZSIC ESTIMATES

16 Previously published ASIC industry estimates have been recompiled on an equivalent ANZSIC basis back to the September quarter 1983. The historical ANZSIC estimates to September 1994 were produced by developing a concordance between ASIC and ANZSIC. The ANZSIC estimates from the December quarter 1994 have been produced by recoding survey unit data from ASIC to ANZSIC. Due to the sample being designed on an ASIC basis from the September quarter 1983 to the December quarter 1996, ANZSIC estimates for this period are subject to higher than normal standard errors.

EXPLANATORY NOTES *continued*

INSTITUTIONAL SECTOR CLASSIFICATION

17 Institutional units are classified by broad economic functions according to the Standard Institutional Sector Classification of Australia which is a key component of the general national accounting framework; for more details refer to *Standard Institutional Sector Classification of Australia (SISCA), 1987* (Cat. no. 1218.0). Public sector data split by the SISCA classification are available on request.

EMPLOYER SIZE CLASSIFICATION

18 Data presented in table 20 show the distribution of employees in employer units over three size ranges. Over time, the composition of these categories will vary as some employer units migrate from one size group to another due to changes in the number of their employees.

RELIABILITY OF ESTIMATES

19 Estimates are subject to sampling and non-sampling errors. For more information refer to the Technical Notes.

IMPROVEMENTS TO COVERAGE

20 Detailed investigations have revealed that a large number of mainly small private sector businesses which should be on the ABS Business Register are not there. The inadvertent omission of these businesses occurred in small quantities over a number of years, although their cumulative effect is quite significant. Several factors have contributed to this omission. Information in the Register is primarily sourced from group employer registrations administered by the Australian Taxation Office. Audits on processing of this information revealed some past deficiencies in this updating process which have been addressed. Other businesses were incorrectly removed from the Register after feedback from ABS business surveys indicated they appeared to be no longer operating.

21 As well as the omissions from the Business Register, there are considerable lags in processing new businesses on to the Register, with consequent lags in their appearance in survey estimates. New estimation procedures have been introduced to allow businesses to be included in the estimates in the quarter in which they commenced operations.

22 Procedures have now been developed to include estimates of the contribution of these businesses, resulting in significant upward adjustments to the previously published level estimates. As the omission from the Register did not follow any set pattern, there will be small adjustments to movement estimates both upwards and downwards. For more details refer to *Information Paper: Improvements to ABS Economic Statistics, 1997* (Cat. no. 1357.0).

BACKCASTING OF SERIES

23 The adjustments have been backcast to the introduction of the series in 1983.

INTERPRETATION OF ESTIMATES OF MOVEMENTS

24 Estimates of wage and salary earners are presented in this publication for the middle month of the quarter. Monthly data are available on request. The survey is conducted quarterly and the sample of employer units is updated each quarter to reflect changes in the Register, from which the sample is selected. These changes arise from the emergence of new businesses, takeovers and mergers, changes to industry classification, changes in the number of employees, and businesses which have ceased operations.

25 Estimates of movements are also affected by changes in the reported number of employees of selected businesses as well as the controlled rotation of the sample.

SEASONAL ADJUSTMENT

26 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation. This means that quarter-to-quarter movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

27 The series have been seasonally adjusted from the September quarter 1983 and the historical series can be made available on request. The seasonal factors are reviewed annually to take account of each additional year's original data. The most recent review took place in the December quarter 1996.

28 Details about the method of seasonal adjustment of these series are available on request.

TREND ESTIMATES

29 The ABS considers that trend estimates provide a more reliable guide to the underlying direction of the data, and are more suitable than either the seasonally adjusted or original estimates for most business decisions and policy advice.

30 The trend estimates in this publication, obtained by dampening out the irregular component from the seasonally adjusted series, are calculated using a centred 13-term Henderson moving average of the seasonally adjusted series. Estimates for the six most recent months cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last six months when data become available for later months. Revisions of trend estimates will also occur with revisions to the original data and re-estimation of seasonal adjustment factors.

31 If a series is highly volatile then the trend estimates will be subject to greater revision for the latest few months as data become available. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In some cases the effect of the irregular component on overall movements will remain in the seasonally adjusted and the original estimates but not in the trend series.

32 For information about ABS procedures for deriving trend estimates and analysis of advantages of using them over alternative techniques for monitoring trends, refer to *Information Paper: A Guide to Interpreting Time Series—Monitoring Trends, an Overview* (Cat. no. 1348.0), or contact the Assistant Director, Time Series Analysis on Canberra (02) 6252 6345.

33 Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* (Cat. no. 1350.0) may also be of interest:

- Picking Turning Points in the Economy (April 1991); and
- Smarter Data Use (March 1992).

EXPLANATORY NOTES *continued*

COMPARABILITY OF RESULTS WITH THE LABOUR FORCE SURVEY

34 The monthly LFS collects data by interview from a sample of about 30,000 private and non-private dwellings, using trained interviewers. Self-employed persons are included in the LFS. The estimates are published in *Labour Force, Australia, Preliminary* (Cat. no. 6202.0) and *Labour Force, Australia* (Cat. no. 6203.0). There are conceptual and methodological reasons for differences in the estimates produced by the two surveys. These are discussed in *Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (Cat. no. 6263.0).

35 When making comparisons of the wage and salary earners components of the two surveys it must be borne in mind that the SEE draws its sample from the ABS Register while the LFS is a household survey. As discussed in paragraphs 20–22 above, the Register is subject to some undercoverage of business units at any point in time. This can lead to undercoverage of samples of businesses selected from the Register. Estimates obtained from households are not similarly impacted.

36 Separate estimates of full-time and part-time employees are included in table 10. For definitions of these terms, see the Glossary. This table was first published in the June quarter 1987 issue of this publication. Information for previous quarters back to the September quarter 1983 is available on request. For the reasons outlined above in paragraph 35, it is difficult to compare estimates of full-time and part-time employees derived from the SEE with those produced from the LFS. In the LFS, a person who works more than 35 hours a week in total in two (or more) part-time jobs is classified as working full-time. However, in this situation, the SEE would show two part-time jobs as having been filled.

37 The ABS considers that the Labour Force series provides the better indicator of overall employment movements at the Australian and State levels. The aggregate employment estimates in the quarterly National Accounts are based on that source. The SEE is the preferred source for industry and sector estimates of employees.

COMPARABILITY OF RESULTS WITH THE SURVEY OF AVERAGE WEEKLY EARNINGS

38 The SEE collects total quarterly employee earnings primarily for use in estimating the gross domestic product component of the Australian National Accounts. While average employee earnings can be derived from these data, the results will not be comparable with those from the Survey of Average Weekly Earnings (AWE) published in *Average Weekly Earnings, Australia, Preliminary* (Cat. no. 6301.0) and *Average Weekly Earnings, States and Australia* (Cat. no. 6302.0). The SEE collects the sum of employee earnings for all pay periods ending in a quarter and the results will be affected by the varying number of pay periods from quarter to quarter, whereas the AWE relates to a specified pay period within a quarter and is not subject to such influences. In addition, certain types of payments within the scope of the SEE, such as retrospective pay, pay in advance, leave loadings and severance, termination and redundancy payments are specifically excluded from the AWE. The SEE earnings data are also subject to seasonal variations, particularly in the December and March quarters, due to the incidence of holidays taken in January being paid in advance and the earnings being reported in the December quarter figures.

RELATED PUBLICATIONS

39 Users may also wish to refer to the following publications which are available on request:

- *Labour Force, Australia* (Cat. no. 6203.0)—issued monthly
- *Average Weekly Earnings, Australia, Preliminary* (Cat. no. 6301.0)—issued quarterly
- *Average Weekly Earnings, States and Australia* (Cat. no. 6302.0)—issued quarterly
- *Labour Statistics, Australia* (Cat. no. 6101.0)—issued irregularly
- *A Guide to Labour Statistics, 1986* (Cat. no. 6102.0)—issued 10 February 1986
- *Small Business in Australia, 1995* (Cat. no. 1321.0)—issued May 1996
- *Labour Force Projections, Australia, 1995–2011* (Cat. no. 6260.0)—issued 20 July 1994.

40 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

UNPUBLISHED STATISTICS

41 In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: photocopy, data tape, floppy disk, CD-ROM, computer printout or clerically extracted tabulation. Generally a charge is made for providing unpublished information. Details of additional data available, and the contact officer's name, are shown on page 2 and in Special Data Service on page 45 of this publication.

RELIABILITY OF ESTIMATES

1 As the estimates in this publication are based on information relating to a sample of employers rather than a full enumeration, they are subject to sampling variability. That is, they may differ from the estimates that would have been produced if the information had been obtained from all employers. This difference, called *sampling error*, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents or in processing by the ABS. Such inaccuracy is referred to as *non-sampling error* and may occur in any enumeration whether it be a full count or a sample. Efforts have been made to reduce non-sampling error by careful design of questionnaires, detailed checking of returns and quality control of processing.

2 The sampling error associated with any estimate can be estimated from the sample results. One measure of sampling error is given by the *standard error* which indicates the degree to which an estimate may vary from the value that would have been obtained from a full enumeration (the 'true' figure). There are about two chances in three that a sample estimate differs from the true value by less than one standard error, and about nineteen chances in twenty that the difference will be less than two standard errors.

3 If the standard error of an estimate is large relative to the size of the estimate, the usefulness of that estimate is seriously impaired. For the tables in this publication, estimates with standard errors greater than 25% of the estimate have been labelled with an asterisk.

4 Standard errors of estimates of level, by industry and States and Territories, for the March quarter 1997, are shown in table A for the private and public sectors and relate only to the middle month of the quarter. As the survey is conducted quarterly from a common sample of employer units, who report details of employees for each month of the quarter, standard errors on all estimates for employees in each month are of a similar magnitude.

5 Standard errors of estimates of movements provide a measure of the reliability of changes in the level of an estimate. Table B shows standard errors for movements in the level of estimates for the private and public sectors of employees between the middle months of the December quarter 1996 and the March quarter 1997.

6 An example of the use of standard error on levels is as follows. If the estimated number of wage and salary earners was 5,800,000 with a standard error of 34,000, then there would be about two chances in three that a full enumeration would have given a figure in the range 5,766,000 to 5,834,000 and about nineteen chances in twenty that it would be in the range 5,732,000 to 5,868,000.

7 An example of the use of standard error on movements is as follows. If the estimated standard error for a quarterly change estimate of wage and salary earners was 15,000 and the quarterly change estimate between two quarters was 40,000 persons, then there would be about two chances in three that a full enumeration would have given a quarterly change estimate in the range 25,000 to 55,000 persons and about nineteen chances in twenty that it would be in the range 10,000 to 70,000 persons.

8 Quarterly movements in estimates of wage and salary earners are considered to be statistically significant where they exceed two standard errors.

9 Standard errors for earnings are approximately the same relative size as standard errors for the number of employees. Detailed standard errors are available on request.

SPECIAL DATA SERVICE

INTRODUCTION

A large range of unpublished data is available from the Survey of Employment and Earnings on request. These data can be produced for clients as customised reports. The variables are listed below.

HOW TO PLACE AN ORDER

Firstly, determine the population and the variables (see following) that you require estimates for. A covering letter indicating these requirements and the intended uses of the data requested should be addressed to:

Labour Statistics Centre
Output Group
Australian Bureau of Statistics
GPO Box K881
PERTH WA 6001

CONTACT OFFICER

If you wish to discuss individual requests, especially in regard to the reliability of estimates for particular cross-classifications and the charges involved, please telephone Ken Clarke on Perth 08 9360 5141.

VARIABLES

The following variables are available from this survey (subject to the reliability of the estimates):

Employees

Persons (available by month)
Full-time/Part-time (available by mid-month of quarter)

Gross earnings (available by quarter)

Gross wages and salaries
Severance, termination and redundancy payments
Fees paid to directors and office holders

Sector

Private sector
Public Sector

Level of government

Commonwealth Government
State Government
Local government

Public institutional sector (SISCA)

General government
Public trading enterprises
Public financial enterprises

Sex

Males/Females (available for mid-month of quarter) until May 1996 only

Industry (ANZSIC classification)

ANZSIC Division (1-digit code—as shown in this catalogue)
ANZSIC Sub-division (2-digit codes)

Employer unit size (private sector only)

Any user specified range (e.g. Under 20 employees; 20–49 employees; 50–99 employees)
Ranges can overlap and do not have to cover the complete range.

G L O S S A R Y

Commonwealth government employees	Employees of all departments, agencies and authorities created by or reporting to the Commonwealth Parliament, including trading bodies such as banks, airlines and communications bodies. Those bodies run jointly by the Commonwealth Government and State Governments are classified to Commonwealth.
Employer size	To derive estimates of employer size, each of the approximately 7,500 private sector employer units is allocated a size classification based on the number of employees actually reported for the middle month of the quarter. The size classification reflects the size of a business in each State or Territory and not necessarily the size of a business Australia wide.
Employer units	Employer units are the statistical units which make up the population from which the sample was drawn (see paragraph 6 of the Explanatory Notes).
Full-time employees	Permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and who received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week.
General government enterprises	Public sector enterprises mainly engaged in the production of goods and services, outside the normal market mechanisms, providing these goods and services to the general public. The cost of operations is often financed from public revenues (e.g. government departments).
Gross earnings	Payments to employees before tax and other items (such as superannuation) are deducted. They comprise amounts paid from interstate or overseas; ordinary time and overtime earnings; overaward payments; penalty payments, shift and other remunerative allowances; commissions and retainers; bonuses and similar payments; payments under incentive or piecework; payments under profit-sharing schemes; leave loadings; annual and long service leave payments; sick leave payments; advance and retrospective payments; salaries and fees paid to company directors, members of boards, committees, commissions, councils, etc.; amounts paid to employees on workers' compensation who continue to be paid through the payroll; and severance, termination and redundancy payments.
Industry	Industry is classified according to the Australian and New Zealand Standard Industrial Classification (see paragraphs 13-16 of the Explanatory Notes).
Institutional sector	Institutional sector is classified according to the Standard Institutional Sector Classification of Australia (see paragraph 17 of the Explanatory Notes).
Local government employees	Employees of municipalities and shires and other local authorities created by or subject to the provisions of local government legislation, such as county councils in New South Wales.

G L O S S A R Y *continued*

Number of employees	All wage and salary earners who received pay for any part of the relevant pay period. All permanent, temporary, casual, managerial and executive employees are included. Part-time and casual employees who may have received pay for only a few hours during the reference period are included. Employees on paid leave and those employees on workers' compensation who continue to be paid through the employer's payroll are also included. Casual employees who work on an irregular basis and who were not paid for the relevant pay period, employees on leave without pay, on strike or stood down without pay for the whole of the pay period are excluded.
Part-time employees	Permanent, temporary and casual employees who are not classified as full-time employees as defined.
Public financial enterprises	Public sector enterprises actively involved in financial market transactions such as borrowing and lending. Excluded are those public bodies whose funds flow directly to or from general government revenue.
Public sector employees	Administrative employees and all other employees of Commonwealth, State and local government businesses and financial undertakings engaged in services and activities such as railways, road transport, banks, postal and telecommunications, education, radio, television, police, public works, factories, marketing authorities, hospitals and welfare institutions.
Public trading enterprises	Public sector enterprises predominantly engaged in the production of goods and services with an intention of maximising profits and financial returns with most operating costs being derived from trading activities.
Reference period for earnings	All pay periods which end within the quarter.
Reference period for the number of employees	The last pay period ending on or before the third Friday in each month.
Sector	Public sector includes local government authorities and all government departments, agencies and authorities created by, or reporting to, the Commonwealth Parliament and State Parliaments. All remaining employees are classified as private sector.
State government employees	Employees of all State government departments and authorities created by, or reporting to, State Parliaments, including organisations for which the Commonwealth has assumed financial responsibility. Following self-government, the Northern Territory and the Australian Capital Territory administrations have been classified to State Governments. Employees of State Governments employed interstate are included in the estimates of the State in which they are based.
